

# i-2-i Vidyo Desktop

## *HOSTED VIDEO SERVICE*

**Enabling organisations of any size to benefit from face-to-face meetings.**

Sole-Aero's i-2-i Vidyo Desktop enables organisations to transform conference calls through the power of video without the need to invest in expensive equipment.

At Sole-Aero we have invested in creating a virtual video conferencing capability in our cloud and provide this to our customers as a pay-as-you-go service. There is no need for expensive meeting room equipment, complex video bridges or changes to your network. You simply connect to a meeting using your desktop, tablet or smartphone device.

This allows organisations of any size to gain the benefits of video conferencing, as affordable and easy as traditional voice conferencing. What is more, the capability is available to your employees, customers and partners regardless of where they are, what device they are using or whether they are connected through a LAN, WLAN or the mobile 3G/4G network.

### **THE VALUE:**

**More Effective Meetings** – turning a voice conference into a face-to-face discussion with the ability to share presentations, documents and applications.

**Reduced Travel Costs** – it is highly likely that you will generate a return on investment from your very first meeting by eliminating the expense associated with travelling to an in-person meeting.

**Improve Productivity** – by reducing the number of hours, days and weeks your employees spend travelling to meetings which can be held, as productively, over video.

**Strengthen Relationships** – by enabling your organisations to have more regular face-to-face meetings with remote employees, customers and partners turning calls into true collaboration and interactions into trusted relationships.

# ON-DEMAND HOSTED VIDEO

Once your organisation subscribes to i-2-i Vidyo Desktop, you gain access to virtual video meeting rooms hosted in our cloud, on-demand.

i-2-i provides you with a high-definition, reliable and secure video conferencing capability without the capital investment that delivers:

## Easy Meeting Set-up

Video meetings can be established now or scheduled in advance through a simple click of the mouse with invitations and links to your private video meeting room sent by email.

## Desktop Client

i-2-i client supports Windows, Mac and Linux PC environments, effectively turning your desktop into a high-performance video conferencing end-point. Due to advanced compression, the desktop client delivers high performance over both wired and wireless connectivity.

## Tablet & Smartphone Client

i-2-i users are able to download a free App for Android and iOS providing them with all of the power and capability of video conferencing on their smartphone or tablets. Users are able to connect using either Wi-Fi or the mobile 3G/4G network and actively participate in video meetings.

## Full Meeting Controls

As the organiser of the meeting you have full control of your video conference with the ability to view a list of participants, chat with individuals or all participants, mute and unmute, turn your camera on and off, and open and lock the virtual meeting room.

## Presentation & Document Sharing

Providing the ability to nominate presenters and allow them to share within screen their presentation, documents or applications on their client.

## Anywhere/Anyhow Access

With no proprietary hardware or premise based bridges, access to i-2-i has no boundaries. Any individual and authorised participant can join the conference using their PC, tablet or smartphone either utilising a wired or wireless connection or leveraging the 3G/4G mobile network.

## Microsoft Integration

i-2-i Vidyo Desktop comes complete with a Microsoft Outlook plug-in enabling you to simply schedule a meeting using your Outlook Calendar and with a single click include the i-2-i Vidyo Desktop Conference Room within your invite.
