

# SOLEAERO HOSTED VOIP DEVICES

An extensive range of IP handsets to choose from to meet your telephony needs.

## **Polycom VVX300 / VVX400 / VVX500**

The Polycom phones are for professional workers who experience a high volume of phone traffic. They have superb HD voice quality capabilities, greyscale pixel display, full-duplex speakerphone and a range of dedicated feature keys that offer one-button access to telephony features.

## **Cisco SPA303 / SPA504 / SPA504A / SPA514G / SPA509 / SPA525**

The Cisco SPA range is ideal for individuals who require a feature-rich handset. They have superb HD voice quality capabilities, monochrome pixel display (SPA 525 includes a full colour display), full-duplex speakerphone and a range of dedicated feature keys that offer one-button access to telephony features.

## **Aastra 6863i / 6865i / 6867i**

The Aastra range is ideal for individuals that require a feature-rich handset but at a cost effective level. They have superb HD voice quality capabilities, greyscale pixel LC D display, full-duplex speakerphone and a range of dedicated feature keys that offer one-button access to telephony features.

## **Softphone**

The Softphone is a software client which is loaded onto the user's PC or laptop which allows the user to make and receive calls with the aid of a suitable headset/microphone. The Softphone has the same basic functionality as the IP phones provided by Sole-Aero and also includes the ability to send and receive instant messages. The user is able to log into this client via an internet connection.

Support is provided across the Windows operating system.

## **Mobile Softphone**

The Mobile Softphone is a client based application installed on mobile devices. The client is supported on iPhone and Android mobile devices.

- Single number reach
- Business number presentation
- Universal access
- Extension to extension dialling
- Unified communications
- Parallel ringing as a shared call appearance device
- Feature transparency
- Any mobile network –No relationship needed
- Reduced call costs

N.B. All IP handsets provide a headset connection, PoE support, Ethernet switch connectivity, personal directory functionality and message waiting indication.
