# INTELLIGENT SIP

**Providing you with dependable VoIP with the intelligence to connect your whole organisation.**

As experts in VoIP technology, Sole-Aero is not only able to provide you with business quality and dependable SIP connectivity into your premise based voice platform, but also the capability to extend voice to every employee in every location.

By delivering SIP trunks from our carrier grade, cloud based switch, Sole-Aero is able to build intelligence into the way that calls are routed enabling you to define call flows at the network level and have calls distributed amongst multiple locations – providing you with central control of local service.

Sole-Aero also enables you to combine VoIP delivery to your premise based communication platform with a hosted telephony platform enabling you to extend voice to remote offices, remote and home workers. This enables you to seamlessly unite all employees in every location onto a single companywide voice platform.

## THE VALUE:

**Reduced Costs** – by switching from ISDN to VoIP SIP based services offers both lower fixed and call charges.

**Improved Agility** – through the ability to intelligently route calls in the network to any location enabling flexibility in the way your company operates.

**Seamless Working** – by providing a single voice platform across all employees in all locations extending your current voice platform through cloud based telephony.

**Sole-Aero Telecoms**

# INTELLIGENT SIP FROM SOLE-AERO

SIP Trunks provide organisations with far greater flexibility and scalability than traditional ISDN circuits as well as significantly reducing line rental and on-going call charges. At Sole-Aero we leverage our highly resilient and secure cloud-based telephony platform to deliver flexible SIP trunk services and also the power of hosted telephony to offer an extensive range of value-added services.

By selecting Sole-Aero for SIP Trunks you not only gain the peace of mind of a high-quality SIP-based service, but have the flexibility to scale up and down as your business needs change, incorporate intelligence within the network on how calls are routed and provide hosted telephony services to remote workers.

### Quality of Service
Sole-Aero's Hosted Telephony leverages proven technology from Broadsoft and Acme Packet, combined with our passion for services, to deliver the highest level of VoIP quality over open-standard SIP trunks.

### Seamless Connectivity
As a standard SIP service, Sole-Aero's VoIP services are fully compatible with any on-premise PBX that supports the SIP protocol, including full support for direct dial inwards (DDI).

### Integrated Hosted Telephony
With Sole-Aero's Intelligent SIP you will gain the ability to combine your SIP trunks with Hosted Telephony enabling you to complement your head-office telephony with cloud-based telephony applications to support remote offices or home workers.

### Automatic Failover
With Sole-Aero's Intelligent SIP you gain the peace of mind of a solution with built-in failover enabling you to automatically queue or divert calls if you exceed capacity or your on-premise PBX fails.

### Network-Based Routing
SIP trunks from Sole-Aero have the value-adding option to define routing plans at the network level to distribute calls across different SIP circuits and/or locations, providing intelligent call flows and seamless integration across your entire organisation.
